WHAT CAN EPIC DO?

Epic Environmental has extensive experience in the development of environmental management systems (EMSs), undertaking compliance and EMS auditing.

With increasing environmental scrutiny placed on organisations, EMSs are being used as a tool for organisations to demonstrate and achieve proactive environmental management. Through compliance and EMS auditing, organisations can identify potential issues and implement corrective measures to improve the on-site processes.

Our environmental management team has extensive experience in development, implementation, update and auditing of EMSs, and undertaking compliance auditing.

ENVIRONMENTAL MANAGEMENT SYSTEM

Our knowledge in best management practice, combined with our experience in system implementation, enables us to develop practical and easily implementable EMSs in accordance with the AS/NZS 14001:2016.

Our practical approach to EMS development involves working with organisations to identify their needs, constraints and opportunities, prior to developing the content for the EMS. When we develop an EMS, we always consider existing systems and processes to ensure we tailor the EMS to integrate as seamlessly as possible into our client's business.

ENVIRONMENTAL AUDITING TEAM

Epic has an experienced team of environmental auditors, who are certified as lead or principal auditors by Exemplar Global. They are led by Romin Nejad, who has completed more than 40 environmental and compliance audits.

Our team's approach to environmental and compliance auditing is not to find fault within organisations, but rather to strive to identify constructive and practical recommendations. Our mantra is an audit is an opportunity for organisations to improve their operations.

We have received feedback on our audit reports, stating that the comprehensive findings are easy to understand, with clearly articulated actions to ensure easy implementation.

OUR EXPERIENCE

- **Powerlink Queensland - Virginia, Brisbane** – prepared documentation as part of the EMS development, including documentation related to contaminated land management, waste management, energy efficiency and ecological matters.
- **Bellwether Contractors - Head Office Brisbane** – assisted with updating the environmental documentation to obtain certification with the requirements of ISO14001:2015.
- **CS Energy Head office and 3 power stations** – engaged over 4 successive years to undertake internal EMS audits of all CS Energy sites.
