WHAT CAN EPIC DO?

Epic Environmental has a strong reputation of practical environmental management and compliance within the construction industry.

With increasing environmental scrutiny placed on the construction industry, Epic is well positioned to provide proven expertise in implementing practical requirements on the ground.

Epic's team has developed this experience through involvement on a variety of large-scale infrastructure and resource projects across Australia as both contractors and consultants.

ENVIRONMENTAL MANAGEMENT PLANS

At Epic, we pride ourselves on developing pragmatic management plans and procedures for implementation during the term of the construction phase. Our objective is to develop systems that can be easily implemented by our clients, ultimately reducing our need on the project and costs for our clients.

The Epic team also includes certified erosion and sediment control specialists who can assist with design, implementation and maintenance of erosion and sediment control devices.

ENVIRONMENTAL MONITORING

Demonstration of compliance through monitoring is key to ensuring environmental risks are adequately managed.

Epic is able to develop and/or implement tailored monitoring programs that can measure the on-going compliance of a project. Epic is experienced in the provision of soil analysis, surface and ground water quality, and dust fall out monitoring.

Epic's team of engineers and scientists are also experienced in the collation and interpretation of results in a timeframe that meets the project needs.

ON-GROUND ENVIRONMENTAL MANAGEMENT

Epic can provide experienced site engineers and scientists that have practical knowledge working within the environmental management field and contracting. We have worked on many significant projects ranging from roads, bridges, pipelines, bulk earthworks, gasification facilities and contaminated land remediation.

We bring an intricate knowledge of construction constraints and environmental compliance risks, enabling us to deliver mutually beneficial solutions.

OUR EXPERIENCE

Monadelphous Engineering Pty Ltd - Cleveland Bay Purification Plant Upgrade, Townsville – prepared an acid sulphate management plan and erosion sediment control plan.

The Jetty Specialists Pty Ltd - Brisbane – environmental management plans and erosion and sediment control plans, BCC jetty construction.

Consolidated Power Projects Pty Ltd Mount Emerald Wind Farm – prepared an environmental management plan, erosion and sediment control plan and undertook site inspections to facilitate implementation.
